Milton Keynes was the first in the UK to build a solar-heated house – **The Bradville Solar Heated House, 1972**

Adapted to collect and store the sun's energy for space and water heating, the Bradville house was designed by MKDC Czech colleagues Szokolay and Skopek *'We built the UK's first active solar house and started a group dealing with energy problems.'*

Jiri Skopek, architect, on Radio Prague 2005
